FUSE

The fuse is a device capable of protecting an electrical or electronic circuit from overloads or short circuits.

The fuse consists of a cartridge made of insulating material such as glass, ceramic or porcelain, in which a very thin metal wire passes where the nominal current circulates. When the current transmitted exceeds a certain threshold, the wire that comes into play, causing the circuit to open, interrupting the flow of current.

In fuses with glass cartridge, if you see the metal wire in order to check its status, in ceramic models instead, the wire is not visible so there is a small mobile element that indicates its integrity.
In models designed to support larger electrical currents, the wire is surrounded by inert material (usually quartz sand) which allows the electric arc to be extinguished faster

FUSIBILI

Il fusibile è un dispositivo elettromeccanico utilizzato per la protezione dei circuiti elettrici o elettronici dalle sovraccorrenti e cortocircuiti.

Sul mercato esistono vari tipi e misure di fusibili; Klemi Contact ha selezionato e presenta nel seguente catalogo i fusibili cilindrici (chiamati anche a cartuccia), fusibili miniaturizzati, SMD, termofusibili, polytron e fusibili per il settore fotovoltaico.

Nei fusibili cilindrici in vetro, è visibile il filo metallico che consente di verificarne lo stato, nei modelli in ceramica invece, il filo non è visibile per cui esiste un piccolo elemento mobile che ne segnala l'integrità.

Nei modelli progettati per supportare correnti elettriche di valore elevato, il filo viene circondato da materiale inerte (solitamente sabbia di quarzo) che consente lo spegnimento dell'arco elettrico più velocemente

There is a Thomas Edison patent in 1890, but the fuses were born many years before. One of the first references to the fuse came to light in 1774 by Edward Nairne, but also in 1879 S.P. Thompson produced what he described as an improved form of fuse. It consisted of two wires connected to each other by a metal sphere with a low melting point. When a sufficiently high current passed through the "fuse" for a long enough period, the sphere dissolved causing the two metal wires to separate.

Esiste un brevetto di Thomas Edison nel 1890, ma i fusibili nascono molti anni prima. Uno dei primi riferimenti al fusibile è venuto alla luce nel 1774 da Edward Nairne, ma anche nel 1879 S.P. Thompson produsse quella che descrisse come una forma migliorata di fusibile. Consisteva in due fili di ferro collegati tra loro da una sfera metallica con basso punto di fusione. Quando una corrente sufficientemente elevata, attraversava il "fusibile" per un periodo abbastanza lungo, la sfera si scioglieva facendo separare i due fili metallici.

ADVANTAGES VANTAGGI

HIGH POWER OF INTERRUPTION ELEVATO POTERE DI INTERRUZIONE

Excellent breaking and limiting characteristics

Ottime caratteristiche di interruzione e limitazione

HIGHT RELIABILITY ALTA AFFIDABILITÀ

Completely static without any moving organ, it does not require maintenance, its replacement restores the original conditions

Completamente statico senza alcun organo in movimento, non necessita di manutenzione, la sua sostituzione ristabilisce le condizioni originarie

SAFETY SICUREZZA

Safe and silent intervention without gas emission, flames, arcs, sparks

Intervento sicuro e silenzioso senza emissione di gas, fiamme, archi, scintille

ECONOMIC ECONOMICO

High levels of protection at low cost

Elevati livelli di protezione a basso costo

APPLICATIONS APPLICAZIONI

LIGHTING / ILLUMINAZIONE

POWER SUPPLIERS / ALIMENTATORI

INVERTERS / INVERTER

WIRING HARNESESS / CABLAGGI

APPLIANCES / ELETTRODOMESTICI

ENGINES / MOTORI

MEDICAL EQUIPMENTS / ELETROMEDICALI

PHOTOVOLTAICS / FOTOVOLTAICO

TELECOM

ELECTRONIC / SCHEDE ELETTRICHE

SEMICONDUCTOR / SEMICONDUTTORI

ENG The technical characteristics of the fuse to be taken into consideration for a correct choice are:

VOLTAGE RATING
The voltage ratings of the fuse must be greater than or equal to the circuit voltage. Because the fuse has such low resistance the voltage rating becomes critical only when the fuse is trying to open. The fuse must be able to open quickly, extinguish the arc after the fuse element has melted and prevent the system open- circuit voltage form re-striking across the open fuse element

PRE ARCING TIME
Time required for a current to bring the fuse element to the fusion, and subsequently to the vapor state. The prearc time is independent of the mains voltage.

ARCING TIME
Period between the instant in which the arc appears and its total extinction (current zero). The arcing time depends on the current of the network, but for the total melting times > 40 ms it is negligible with respect to the prearc time.

TOTAL MELTING TIME
Sum of prearc and arcing times

OPENING POWER
Value of the prospective short-circuit current which the fuse is capable of interrupting at a specific use voltage.

THERMAL STRESS
Integral value of the breaking current in the unit of total melting time expressed in A²s

Le caratteristiche tecniche del fusibile da tenere in considerazione per una corretta scelta sono:

TENSIONE NOMINALE
La tensione nominale del fusibile deve essere superiore o almeno identica alla tensione del circuito. Poiché il fusibile ha una resistenza bassa, la tensione nominale diventa critica solo quando il fusibile sta cercando di interrompere la corrente nel circuito. Il fusibile deve essere in grado di aprire il flusso di corrente rapidamente e mantenere il circuito aperto

TEMPO DI PREARCO
Tempo necessario ad una corrente per portare alla fusione, e successivamente allo stato di vapore, l'elemento fusibile. Il tempo di prearco è indipendente dalla tensione di rete

TEMPO D'ARCO
Periodo compreso tra l'istante in cui appare l'arco e la sua estinzione totale (corrente nulla). Il tempo di arco dipende dalla corrente della rete, ma per i tempi di fusione totale > 40 ms è trascurabile rispetto al tempo di prearco.

TEMPO DI FUSIONE TOTALE
Somma dei tempi di prearco e d'arco

POTERE DI APERTURA
Valore della corrente di cortocircuito presunta che il fusibile è in grado di interrompere ad una tensione di impiego specifica

SOLLECITAZIONE TERMICA
Valore dell'integrale della corrente di interruzione nell'unità di tempo di fusione totale espressa in A²s
